

Drug Quantity and Measurement

Drug Quantity:

When offense file class 35001 exists, drug information is required. When the quantity is received by MICR, a 3-space decimal place is implied. For example, if we receive 1000, MICR will interpret as 1.000.

Please verify with your vendor, if needed, if you believe your drug quantities are being inaccurately sent to MICR.

Drug Measurement

There cannot be more than one measurement category for the same drug type.

- Weight: Gram, Kilogram, Ounce, Pound
- Capacity: Milliliter, Liter, Fluid Ounce, Gallon
- Units: Dosage Unit, Number of Plants

Example: You cannot submit marihuana in both grams and kilograms, but you can submit marihuana in both grams and number of plants.

Reporting Drug Residue

- If the Drug Type is known quantity should equal .001 (note this is received if your vendor sends as 1.)
- If the Drug Type is unknown, choose unknown Drug Type leaving Estimated Drug Quantity and Suspected Drug Type blank.
